INTRODUCTION

Access management enters the new millennium with considerable momentum. Many States and local jurisdictions either have in place or are planning comprehensive access management programs. Others are actively practicing access control at the project level or through access permit programs. There continues to be significant interest in the concept because it can provide high returns at a relatively low cost.

This Overview highlights important concepts and future challenges as outlined by Ronald K. Giguere, FHWA. For his complete text, [click here](#). For more information about each topic, click on one of the documents listed.

Use Acrobat's tools to either copy text or graphics to enhance your PowerPoint Presentations (please remember to get permission and give credit to authors!)

Remember to watch for the hand to change to a push button finger that identifies a link or button to press!

Note: If the Acrobat tools don't work as expected, make sure the hand button is pressed
