

# aaSIDRA for Roundabouts

## INTRODUCTION

**Rahmi Akçelik**

Director, Akcelik & Associates Pty Ltd  
Adjunct Professor, Monash University

**Mark Besley**

Director, Akcelik & Associates Pty Ltd

TRB Roundabout Conference  
Vail, Colorado, USA, May 2005

# DEMO Objectives

- ❑ You are interested in **Roundabouts** –  
How can **aaSIDRA HELP** you?
- ❑ This brief **Introduction** first
- ❑ **aaSIDRA 2.1 HCM version with US Units**
- ❑ **QUICK examples** to demonstrate:
  - Input & Output
  - **Various intersection types**
  - Different **GEOMETRIES**
  - **CALIBRATION**
  - **Sensitivity Analysis**
  - **Case Studies**

7-10 August 2005  
ITE 2005 Annual Meeting

# Melbourne, Australia

**Australia...**

**Roundabouts are very common**

**Images for US driving conditions**

# aaSIDRA Users

aaSIDRA  
most popular  
roundabout  
analysis  
software in the  
USA

- ✓ First released in 1984
- ✓ **Over 1900** sites in more than **80** countries

# US Highway Capacity Manual (HCM) version of aaSIDRA

---

- ✓ **USA largest user group (over 700 sites)**
- ✓ **The HCM version of aaSIDRA offers options for US Customary and Metric units**
- ✓ **aaSIDRA is HCM compatible**  
See: [www.aatraffic.com/SIDRA/aaSIDRA\\_HCMversion.htm](http://www.aatraffic.com/SIDRA/aaSIDRA_HCMversion.htm)

What makes aaSIDRA different?

## Total intersection analysis tool

Model CONSISTENCY in evaluating alternative intersection treatments

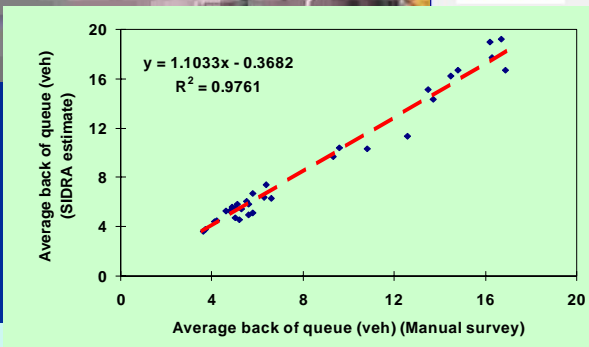

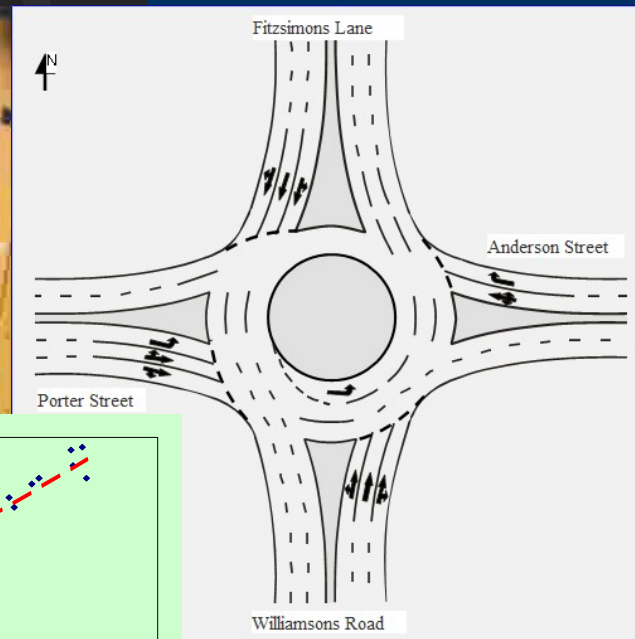

# aaSIDRA areas of application

# aaSIDRA is based on extensive research and development effort

## Documentation

- ✓ aaSIDRA User Guide
- ✓ Research Reports
- ✓ Articles
- ✓ Our website

# What makes aaSIDRA different?

## Level of analysis detail

*more detailed  
model of  
traffic stream*

Individual vehicles			<i>Microsimulation models</i>
Drive cycles			<b>aaSIDRA</b>
Traffic flows	<i>Most traffic analysis models e.g TRANSYT, HCS</i>		
Speed-flow functions	<i>Most transport planning and economic analysis models</i>		
	Approaches	Lane groups	Individual LANES

**Micro-analytical  
model**

*more detailed model of road geometry*

What makes aaSIDRA different?

# Lane-by-lane analysis

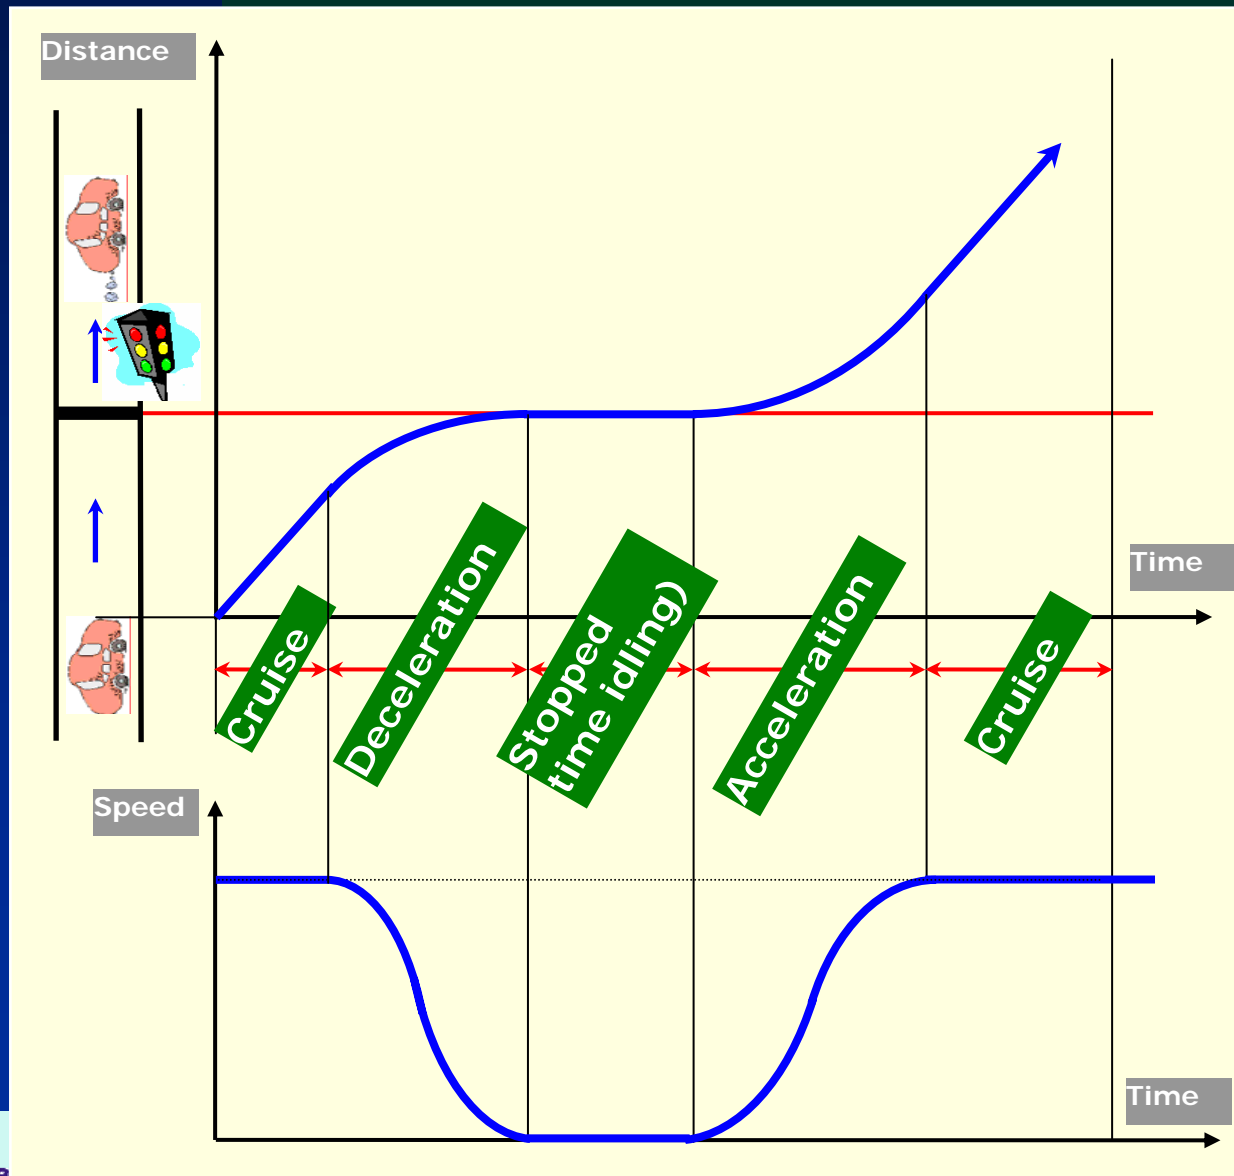

aaSIDRA is the **ONLY** major analytical software with **lane-by-lane analysis**

**Short lane analysis**

- Lane flows
- Unequal lane use
- De facto exclusive lanes

# What makes aaSIDRA different?

## Four-mode elemental model (drive cycles)

For modeling

- ❖ Geometric delay
- ❖ Operating COST
- ❖ Fuel consumption
- ❖ Emissions

What makes aaSIDRA different?

# Total intersection analysis tool

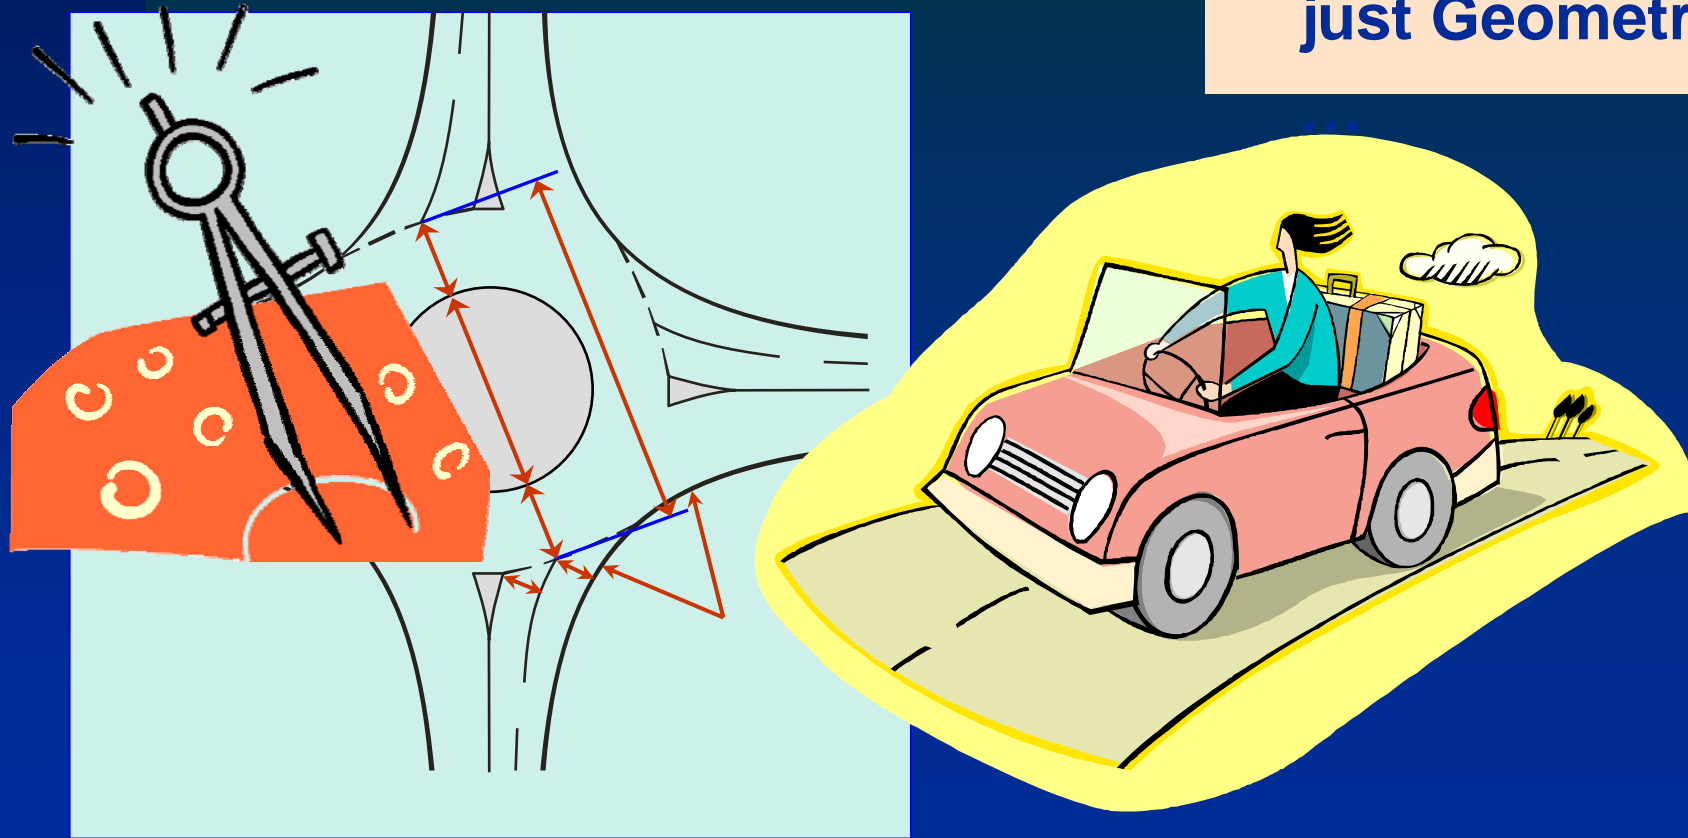

Model **CONSISTENCY** in evaluating alternative intersection treatments

# Roundabout Model

- **Geometry**
- **Driver-Vehicle Characteristics**

**BOTH are included in aaSIDRA (not just Geometry)**

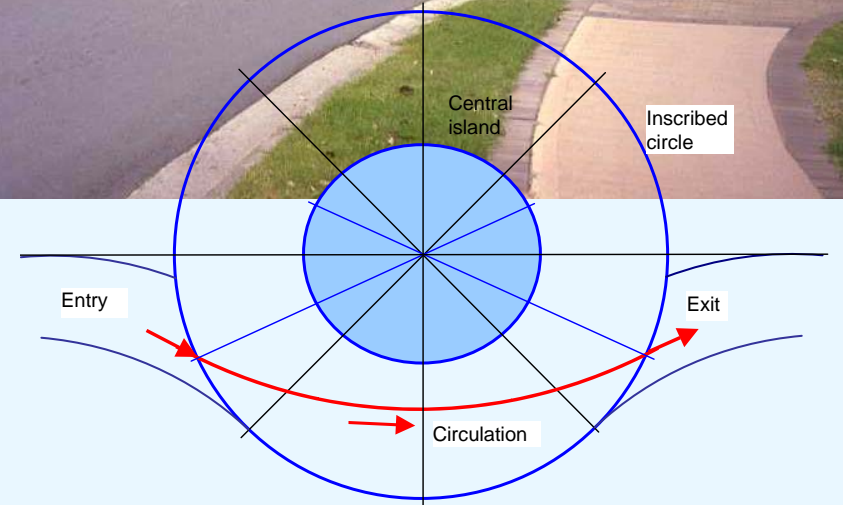

**Modeling of  
LANE USE at  
roundabouts is  
very important**

# What makes aaSIDRA different?

## Roundabout design

Important for roundabouts with **low demand**:  
aaSIDRA models negotiation radius, speed and distance allowing for path smoothing by drivers

# What makes aaSIDRA different?

## Roundabout design

Important for roundabouts with **high demand**: aaSIDRA identifies congestion caused by heavy circulating flows especially with **unbalanced flow patterns**

# What makes aaSIDRA different?

## Roundabout model

aaSIDRA uses an *empirical gap-acceptance method* to model roundabout capacity and performance.

The model allows for the effects of *both roundabout geometry and driver behaviour*.

It incorporates effects of:

*priority reversal* (low critical gaps at high circulating flows),

*priority emphasis* (unbalanced O-D patterns), and

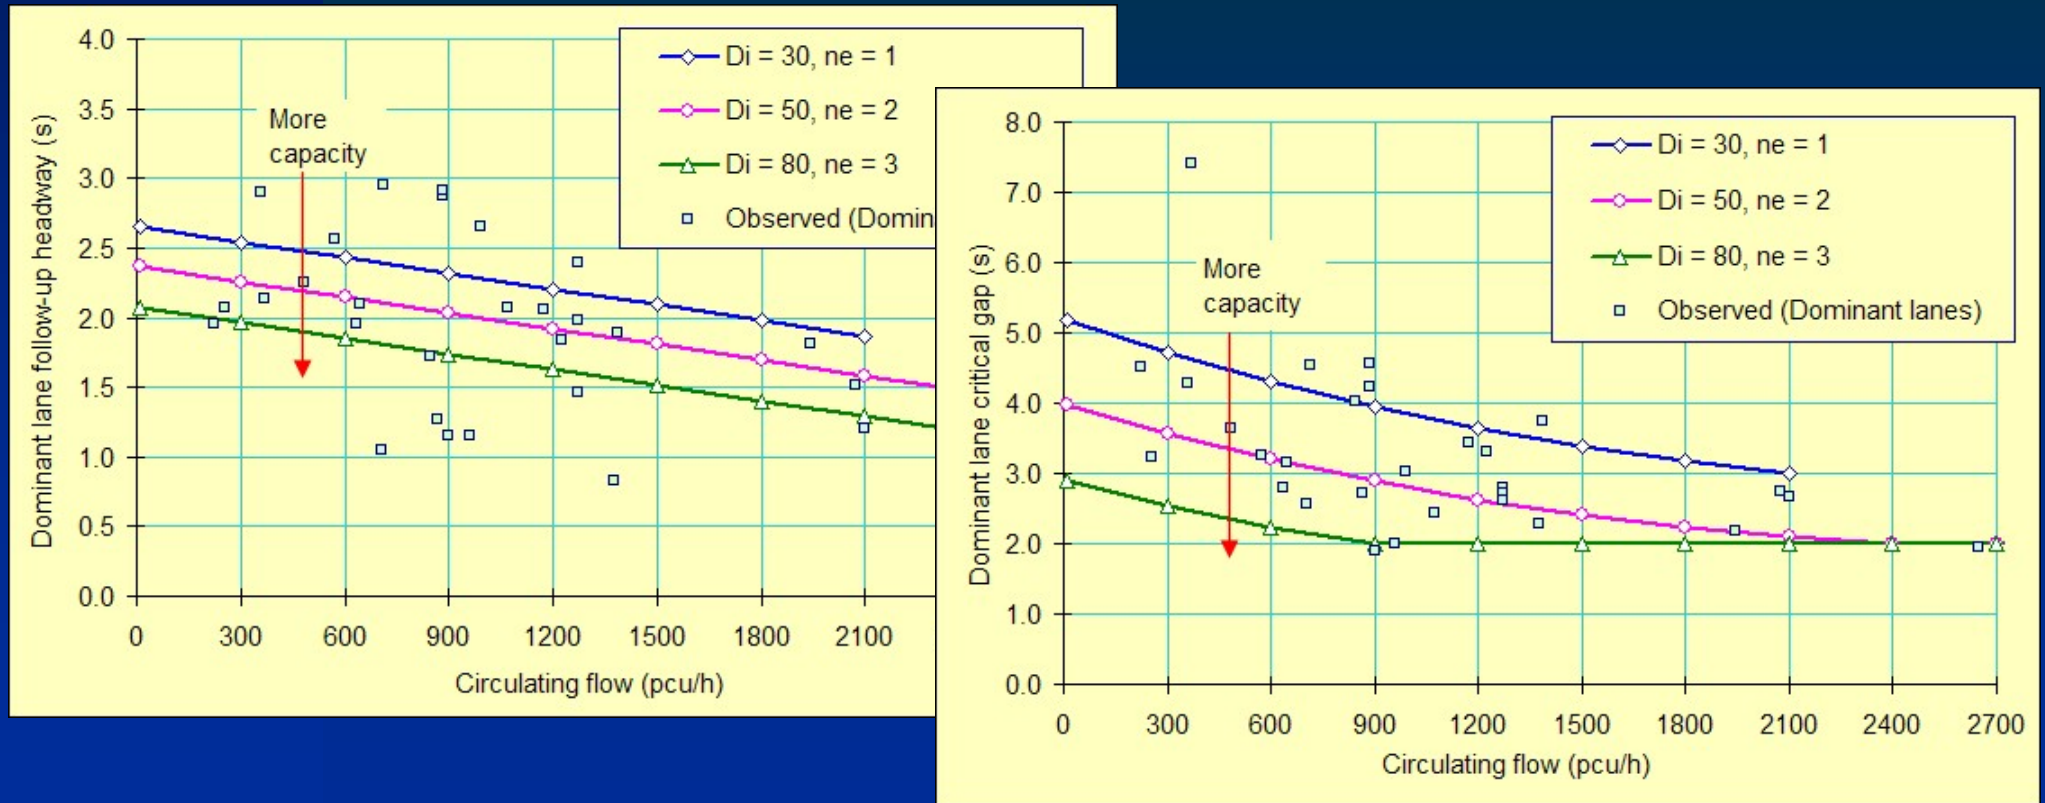

*unequal lane use* (both approach and circulating lanes).

**CAPACITY** can be measured as a *service rate* for each traffic *lane* in *undersaturated conditions* according to the HCM definition of capacity to represent *prevailing conditions*.

# What makes aaSIDRA different?

## Roundabout model

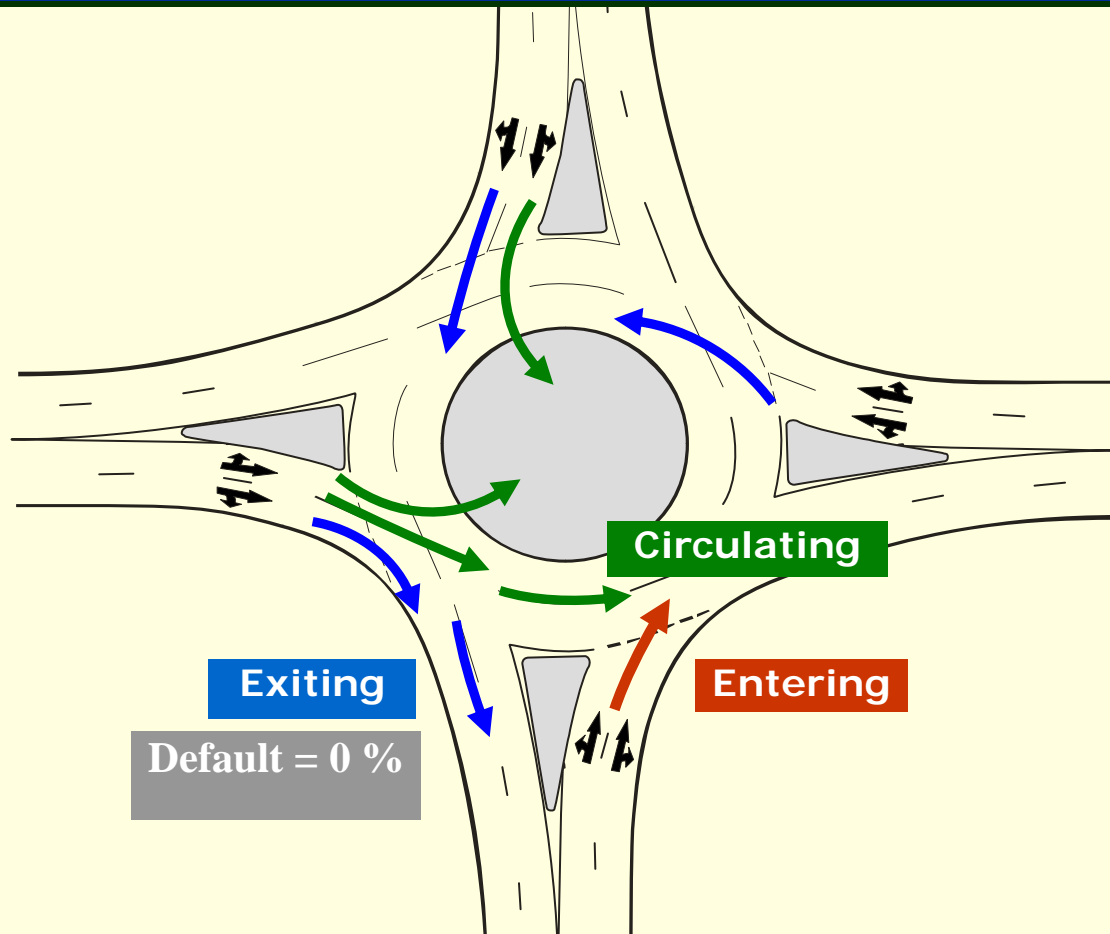

aaSIDRA gap-acceptance parameters are **NOT fixed**, but vary with roundabout geometry and flow rates.

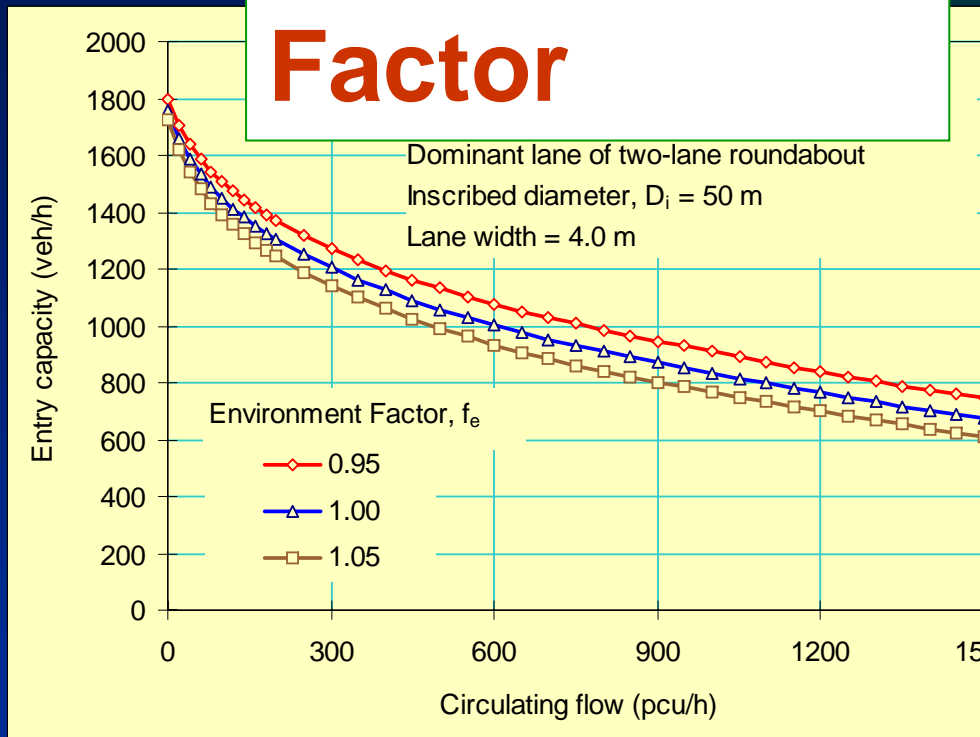

**Dominant flows  
at roundabouts  
(effect of O-D  
demand pattern)**

# Effect of Exiting Flow can be included

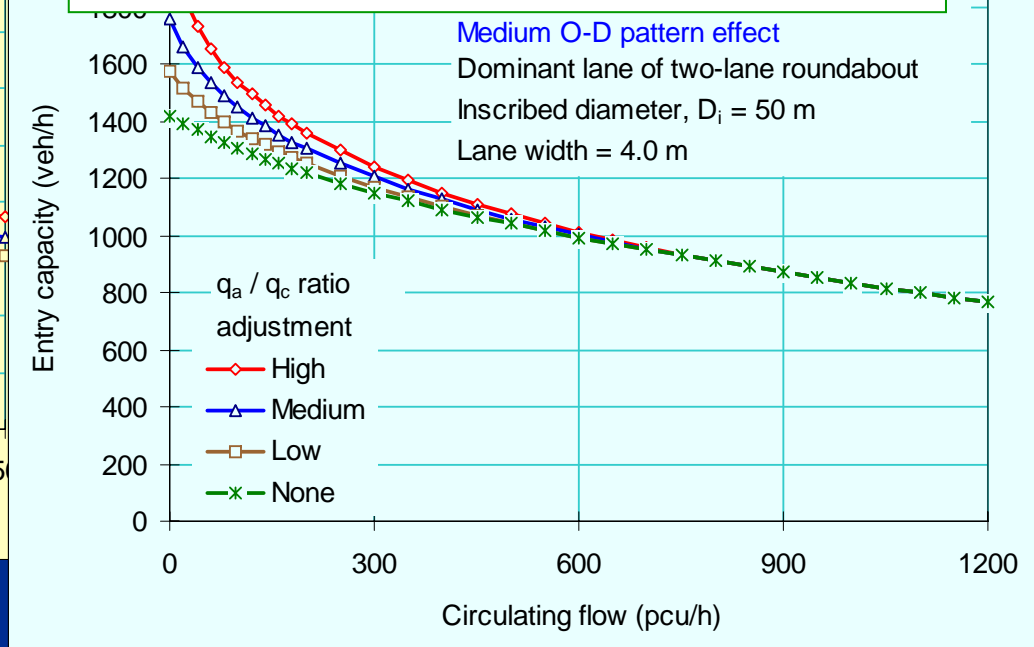

# Model Calibration for local conditions

## Environment Factor

## Adjustment for the Entry Flow / Circulation Flow Ratio

# Model Calibration for local conditions

## HCM single-lane roundabout example, WB approach:

inscribed diameter = 36 m (118 ft), entry lane width = 4.0 m (13 ft), approach half width = 3.5 m (11.5 ft), turn radius = 26 m (84 ft), flare length = 20 m (66 ft), entry angle = 30°

aaSIDRA model with **default parameters**:  
Environment Factor = **1.0**, **Medium** entry flow adjustment, Medium O-D pattern effect

aaSIDRA model **calibrated to match the HCM lower capacity model**:  
Environment Factor = **1.15**, **Low** entry flow adjustment, Medium O-D pattern effect

# Information on roundabouts

Visit our web page for extensive information  
on roundabouts

Presentation

# aaSIDRA for Roundabouts

## CONCLUSION

- Paper presentations during the conference:
  - Session 4A, Monday – Metering Signals
  - Session 7B, Tuesday – Model Calibration
- DENVER Workshop: 26-27 May
- Exhibition:
  - Leaflet
- DISCUSS any issues with us
